Tools for agile working

ophelis deem

Flexible, fast and cooperative: In the face of ever-accelerating change and high pressure to innovate, agility is a prerequisite for future business success. Classic project management is being complemented with agile methods such as Scrum or Design Thinking, and this is happening not only in IT development but in other areas of business as well. Armed with these innovations, cross-functional teams are developing projects quickly and independently and seeking out new solutions. Agile and creative project work requires short pathways and continuous, intense development within teams which communicate on the same level rather than hierarchically. Modifications are an integral component of the operating process. This way of working requires new tools and spaces that support precisely this approach to project work and its new mobility. ophelis deem was created for just this.

- Flexible: Work and dialogue are no longer restricted to typical meeting rooms; ophelis deem makes a spontaneous change of roles easy.
- Mobile: Maximal mobility with comfortable handling makes ophelis deem the perfect co-player in teams that are always configuring themselves anew.
- Structured: With flexible elements for spatial organization, ophelis deem creates centre-points for teamwork in open office landscapes.
- Electrified: Easy-to-access power supply options support mobile working, intensive communication and organization amid changing tasks.

deem arena

Perfect either for seated or for stand-up meetings with space for work and storage, deem arena is a hybrid furniture solution with power supply that serves as your centre for exchanges and presentations, and also plays very consciously with alternative working postures designed to invite cooperative interactions. Each module accommodates up to nine people.

deem benches and tables

deem benches and tables make mobility easy. Castors allow complete flexibility and creative interior configuration to meet the requirements at hand. Centrally braked castors are an optional addition for standing and sitting-height tables, while tables equipped with a power supply have a desk-top connection panel for easy power access.

deem memo and deem memo wall

So-called boards are simultaneously a central meeting place for agile teams and the centre of information exchange. deem memo supports teamwork with a presentation surface that is easy both to fit and to remove, and which can serve as a whiteboard, projection screen or magnetic pin board. The board can also be taken back to workstations after the meeting and made ready for the next.

deem memo wall is the wall-oriented counterpart to deem memo and is used on the wall as a presentation space.

deem meta

As a structuring, space-forming piece of furniture, deem meta presents a centre-point for teamwork in open office landscapes. Acoustically effective, with its suspended whiteboards the system serves simultaneously as a presentation surface and as a wardrobe. Shelves, seat cushions or planting bowls can be combined as needed.

ophelis deem

deem arena

Basic module, basic module prepared for extension, intermediate module, end module

deem memo

Mobile visualization with detachable whiteboard.

deem memo wall

Mobile presentation module for wall mounting

deem meta

Acoustically effective spatial organization with removable whiteboard as well as shelf, seating or planting bowl.

deem tables

Castor-based; optional comfort brake with central locking and release, as well as power supply including cable management and automatic cable rewinder.

deem benches

Mobile benches in three sizes.

deem standing tables

Castor-based; optional comfort brake with central locking and release, as well as power supply including cable management and automatic cable rewinder.
