

paravento XL

Diverse design options – wide variety of materials

The large range of surfaces from the ophelis collection in melamine, whiteboard and textile opens up a wide variety of possibilities for designing rooms. The end profiles in melamine give the walls a clear profile, are resistant and easy to clean. The partitions are selectable with different materials on both sides.

The textile collection includes a variety of different series from our partners’ kvadrat and camira.

High acoustic and visual screening

paravento XL structures rooms, screens and is acoustically effective.

Finished in textile, the wall meets the highest acoustic requirements. paravento XL comes in a Sandwich construction with core, acoustic fleece, acoustic panel and fabric.

paravento XL achieves the highest absorber class B for free-standing walls and has been tested according to DIN EN ISO 354, DIN EN ISO 11654 and ASTM C 423.

paravento XL

Creating new ways of structuring spaces, dividing open plan office buildings independently, maintaining the flexibility of organisations: ophelis developed paravento XL based on this idea.

paravento XL is a modular partitioning system in the room or at the table that supports acoustic and visual discretion. paravento XL structures rooms independently of walls, group offices zoned even better and visiting areas screened off. The system is freestanding and reversible.

- Filigree partition system for zoning as well as acoustic and visual screening.
- As an L-shaped linked configuration, paravento XL stands freely in the, does not require any additional foot stabilisers and can be covered with different materials.
- As a linear linked configuration with plant box or seat box, paravento XL stands freely in the room.
- Various surfaces selectable within the system: melamine, whiteboard and fabric-covered (single and double-sided) are available.
- Depending on the application, different widths are invisibly and reversibly linked together.
- paravento XL can be combined with our space organisation system paravento and can be used in the direct workplace environment.
- Integrated at the work desk, paravento XL provides very high acoustic shielding.
- In addition, cables can run invisibly from the wall to the working table.

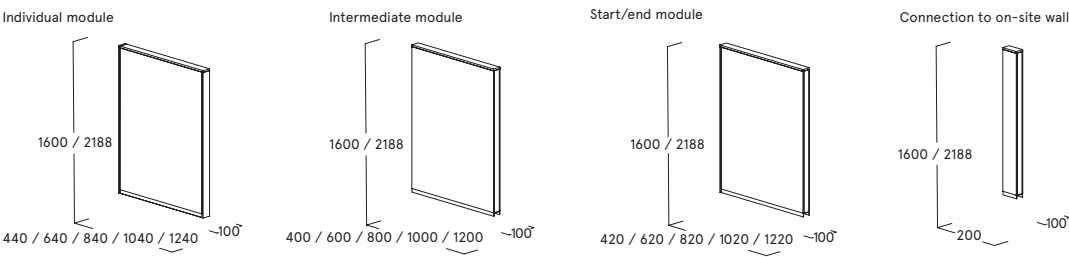

paravento XL movable wall in room

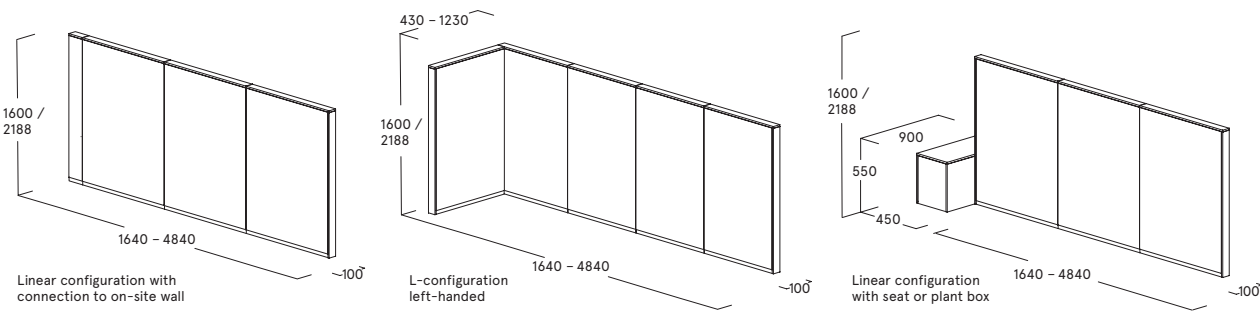

Combined with each other the individual modules of paravento XL form partition walls. As a linear linked configuration, paravento XL can stand freely in the room with a seat or plant box. However, the system is also attachable to the wall. The elements are selectable with different materials on both sides, including a whiteboard surface. This allows a wide variety of visual impressions and creates uses.

paravento XL achieves a high level of acoustic effectiveness as a premium acoustic covering with textile. The partition wall in the room is available in two heights: 1600 mm and 2188 mm. The modules can be freely configured and linked as a linear or L-link up to a maximum of 4800 mm.

Modules

Configurations

paravento XL movable wall at the table

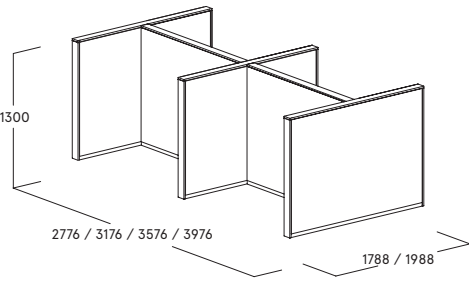

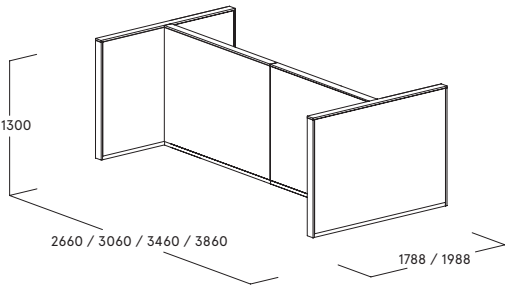

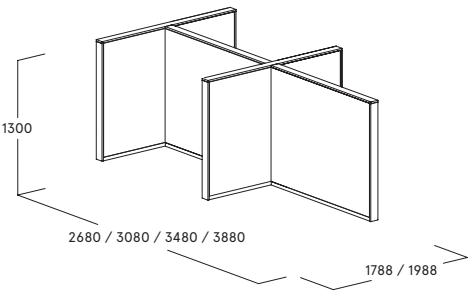

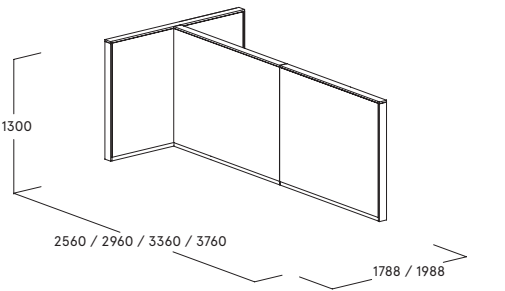

paravento XL partition wall at the table encloses worktables, screens off walkways and creates quiet working areas in the room. Various fixed types are available; the individual modules are invisibly inter-linked and reversible.

The textile-covered version has a high acoustic efficiency. The integrated cable management allows for invisible electrification of the worktables.
